RE: Preliminary Soil/Site Evaluation on a Portion of Property off Guess Road, PIN: 0816-01-49-6668

Dear Mr. Beglane:

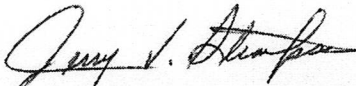

A preliminary soil/site evaluation was conducted on a portion of the above referenced property to determine suitability for use with a ground absorption sewage treatment and disposal (septic) system. Based on this evaluation it was determined that there is good potential for the desired use.

The soils are well drained with red clayey and loamy subsoil exhibiting subangular blocky structure underlain by saprolite at depths of 28 – 38 inches but dominantly 30 – 36 inches. You may refer to the attached map for the approximate location of borings.

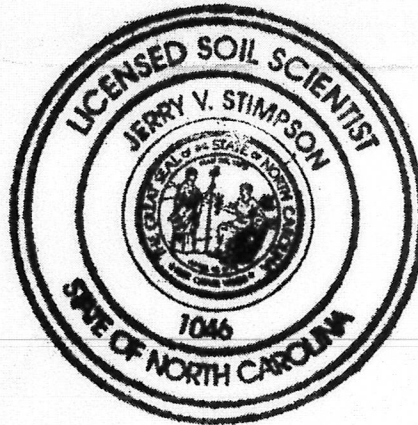

Depending on location of structures a pump may be required. Additional study after the property is surveyed and plans are further developed will be needed.

Please note that this report is for information only and does not represent approval for system installation or site work; approval is granted with the issuance of improvement permits and authorizations to construct by the Durham County Health Department.

Sincerely,

Jerry V. Stimpson
Licensed Soil Scientist
